#### Abstract

Introduction: Education is vital for the healthy growth and development of one's personality. In making the 'being 'human' to produce: human beings" lies the importance of educating the teens. The parental involvement has a positive impact on the academic achievement and it is held true. No matter the race or ethnic group. The education to teen must aim at helping an individual to form a skill. Set and work upon it to develop expertise in the schools of his/her interest.

Methodology: Quantitative approach and descriptive survey research design was adopted for the study. Purposive sampling technique was used to select the 200 people from the selected urban and rural schools at Puducherry.

Result: The result showed that the overall level of academic academic achievement among adolescents in urban school $43 \%$ were high achievers, $57 \%$ were moderate achievers and none of them was lower achievers. In rural adolescents 38 were high achievers, and $62 \%$ were moderate achievers and none of them lower achievers. So, the adolescents were involved with academic achievements they improve their studies. Academic achievements is important for the adolescents to involve to concentrate their studies.

Keywords: Adolescent student; Academic Achievements; Urban and rural school.

## INTRODUCTION

Education is vital for the healthy growth and development of one's personality. In making the 'being 'human' to produce: human beings" lies the importance of educating the teens. The parental involvement has a positive impact on the academic achievement and it is held true. No matter the race
or ethnic group. The education to teen must aim at helping an individual to form a skill. Set and work upon it to develop expertise in the schools of his/ her interest.

Whenever there is a lack of education and has a background of dysfunctional family set up, the adolescents moves on to practice Risk taking behavior (Gabrielsmilkstein 1978). Adolescent's health risk behaviors are on the rise globally and their prevalence is also alarmingly increasing in the Asian countries. Various studies revealed that $5 \%$ to $35 \%$ of children suffer from some kind of maladjustment, which is generally termed as neuroses.

An adolescent is characterized by a number of cognitive emotional, physical and attitudinal changes which can be the causes of conflict on others. The major characteristics of growing up are exploratory and experimental behaviors that sometimes carry risks. At the onset of adolescent's years, parents may supervise observe with the sudden behavioral changes seen in their children. They become more attached to their friends and prefer spending quality time with them. Going against the parents decision or not giving what they want are as challenges by most teens.

## Objectives

- To Assess the Academic Achievements of adolescents in urban and rural schools.
- To Compare the Academic Achievements of
adolescents in urban and rural schools.
- To Correlate the Academic Achievements of adolescents in urban and rural schools.
- To Associate the Academic Achievements of adolescents in urban and rural school with demographic variable.

## MATERIALS AND METHODS

Quantitative Approach. Descriptive research design was used to conduct research at a selected government higher secondary schools in puducherry. 200 in which 100 students in urban school and 100 students rural schools were selected by using convenience sampling technique. Those who fullls the inclusion criteria and those who were available at the time of data collection. Who are the X and XII standard were excluded from the study. Structured interview schedule was used to collect the data. The structured questionnaire comprised of A and B . Section A consist of demographic variables, Section B consist academic activities and self motivational function, in the school by using standardized tool. Formal permission obtained from the concerned authority, data was collected. The participants were explained about the purpose of the study and assured that the collected data was be maintained carefully and informed consent was obtained The collected data was analyzed by using descriptive and inferential statistics.

## RESULTS

The result showed that the overall level of the overall level of Academic Academic achievement among adolescents in urban school $43 \%$ were high achievers, $57 \%$ were moderate achievers and none of them was lower achievers. In rural adolescents 38 were high achievers, and $62 \%$ were moderate achievers and none of them lower achievers. The study result revealed that Table 1 consist of that With regard to the age of the adolescents in urban school majority of them $89 \%$ belonged to the age group of 16 years, whereas to rural school majority of them $89 \%$ belonged to the age group of 16 years. In relation to the gender majority of the adolescents were male $68 \%$. And females were $32 \%$ in urban schools. In rural schools majority of the adolescents were female $71 \%$ and males were $29 \%$. With Regard to the Religion majority of the adolescent were Hindus were $89 \%$. whereas in rural school majority of the adolescents were Hindus $73 \%$. Majority of adolescents were $87 \%$ belongs to nuclear family. In rural school majority of them were $47 \%$ belongs With regard to parents marital status majority of the adolescent's parents were living together $64 \%$, in urban school. In rural schools majority of the adolescent's parents were $52 \%$ living together, With regard to the fathers educational status
majority of the adolescents fathers were competed primary schooling $46 \%$, in urban schools. In rural schools majority of the adolescent's fathers were completed secondary schooling 37\%, The Above table with regard to majority of adolescent's fathers was $33 \%$, in urban schools. In rural majority of adolescent's fathers were skilled $29 \%$, With regard to of the mothers education majority of adolescent's mother were completed primary schooling $50 \%$, in urban schools. In rural majority of adolescents mothers were completed in primary schooling $50 \%$ With regard to occupation of mothers majority of adolescent's mothers were $48 \%$, in urban schools. In rural adolescents majority of adolescent's mothers were $41 \%$ unemployed, Withregard monthly income majority of adolescents were belongs to below 5000, $57 \%$, in urban schools. In rural adolescents majority of adolescents were belongs to below $5000,32 \%$. Fig. show that frequency, percentage distribution of the level of family function among adolescents in urban and rural schools. Most of the adolescents in urban school were $86 \%$ highly functional family, $12 \%$ were moderately dysfunctional family and $2 \%$ were severe dysfunctional family. In adolescents of rural school were $79 \%$ highly functional family, $16 \%$ were moderately dysfunctional and $3 \%$ were severe dysfunctional family. The Table 2 Depict the mean and standard deviation for level of family function among adolescents in urban and rural schools. The
present study concluded that comparing with the level of family function there was no difference among urban and rural school adolescents. The Table 3 shows that spearman correlation test was
used to correlate family function the Finding.
The above Table shows that frequency, percentage distribution for level of academic

## DISCUSSION

The result showed that The overall level of Academic achievement among adolescents in urban school $43 \%$ were high achievers, $57 \%$ were moderate achievers and none of them was lower achievers. In rural adolescents 38 were high
achievers, and $62 \%$ were moderate achievers and none of them lower achievers.

Atenprimaria (2011) conducted a study to determine the relationship between academic achievement, self esteem and family function of adolescents among 74 students between 10 and 17 years of age based of FDACES III and by school evaluation scale and concluded that low self esteem and family dysfunction were the risk factors for low academic achievement. It was revealed that adolescents from well functioning families were
most likely to be bonded to school.

CONCLUSION
The present study concluded that comparing the level of Academic achievements urban and rural school there was no difference. So, concluded adolescents student from moderately academic achievements were achieved, most likely to be bonded to academic achievement their academic activities it is important for the adolescents to reduce high risk taking behavior.
